PROFESSIONAL SUMMARY

Cybersecurity professional and MCA graduate and hands-on experience in SIEM monitoring, Windows Event Log analysis, and threat detection. Experienced in building virtual SOC labs using Splunk and investigating Windows authentication events (4624 and 4625) to identify suspicious activity and potential brute-force attacks. Familiar with network security, incident response, and security monitoring. Seeking an entry-level SOC Analyst role to apply skills in security monitoring, alert triage, threat detection, log analysis, and incident response.

TECHNICAL SKILLS

SIEM & Security Tools: Splunk (SIEM), IBM QRadar, Microsoft Sentinel, CrowdStrike Falcon, Wazuh, Wireshark, Nmap, Burp Suite, Microsoft Defender, VirusTotal

Security Operations: SIEM Monitoring, Security Event Analysis, Log Analysis, Threat Detection, Alert Triage, Incident Response

Windows & Security Monitoring: Windows Event Logs, Process Creation Monitoring, Authentication Events, PowerShell

Networking: TCP/IP, DNS, HTTP/HTTPS, DHCP, OSI Model, Common Ports & Protocols, Network Traffic Analysis

Security Frameworks: MITRE ATT&CK, OWASP Top 10, Cyber Kill Chain

Operating Systems: Windows, Linux, UNIX

Programming & Query Languages: Python, Bash, PowerShell, SQL, KQL

Virtualization: VirtualBox

CERTIFICATIONS

ISC2 Certified in Cybersecurity (CC)

Splunk Fundamentals 1 — Splunk Education

Introduction to Cybersecurity — Cisco Networking Academy

IBM Cybersecurity Fundamentals — IBM

SOC Analyst Course — Brolly Academy

INTERNSHIP EXPERIENCE

Cybersecurity Virtual Intern — EduSkills

Jul 2025 – Sep 2025 | 10 Weeks

- Gained structured exposure to cybersecurity fundamentals, security operations, and industry-oriented security practices.
- Supporting Organization: Palo Alto Networks.

PROJECTS

SOC Detection & Monitoring Lab — Splunk SIEM

- Configured Windows Event Log ingestion and developed SPL searches to detect failed authentication attempts and suspicious login activity.
- Investigated Windows Security Event IDs **4624** and **4625** to identify successful and failed authentication patterns.
- Detected multiple failed login attempts and investigated potential **brute-force activity** using Splunk.

Threat Hunting with SIEM & MITRE ATT&CK

- Investigated simulated adversary activity using SIEM queries across Windows security and endpoint telemetry.
- Hunted for suspicious PowerShell, process execution and authentication behaviors and analyzed related security events.
- Mapped findings to MITRE ATT&CK techniques and developed detection logic and investigation documentation.

Phishing Email Detection & Investigation Platform

- Investigated simulated phishing emails using header analysis, SPF/DKIM/DMARC, URL and domain analysis.
- Analyzed suspicious indicators using threat-intelligence sources and identified IOCs associated with phishing activity.
- Documented investigation findings, phishing verdicts, MITRE ATT&CK techniques and recommended response actions.

EDUCATION Master of Computer Applications (MCA)

SRK Institute of Technology, Vijayawada | JNTUK | CGPA: 7.5 | 2026
